

★ If there are n nodes, there will be $n-1$ edges.

★ Tree is basically a collection of nodes.

Basic Terminology -

- Root - Topmost node of the tree.
- ~~Leaf~~ Parent - Node having child nodes.
- Child - Node directly connected below a parent.
- Leaf - Node with no children. (Also known as external/~~leaf~~ terminal nodes)
- Siblings - Node with the same parent.
- Ancestors - All nodes from root to that node's parent.
- Descendants - All nodes lying below a node.
- Internal Node / Non-Terminal Nodes - Nodes having children.
- ★ 'Level' starts from 1 while height starts from 0, taking this convention.
- Forest - A collection of trees.
- Degree - No. of children a node has
- Subtree - Tree formed by a node & its descendants.
- Depth - Distance of a node from a tree's root.

★ Binary Tree - Each node can have maximum of 2 children.
